WebcastManager: Archiving

In WebcastManager, an "Archive" option is now available in the context menu for each webcast. This hides the webcast from the default view. It will also be hidden from the Operator and will no longer be available to the Consumer.

Once archived, the webcast can be found in the new archive view. There, it can be unarchived via a context menu, returning it to the default list and making it available once again to the Operator and Consumer.

WebcastManager: Editing a Webcast
