# Platform Update

Here is an overview of all improvements we've made to the VideoManager since March 2018.

- We now support SSO for VideoManager Pro. You can securely login via a pre-configured Identity Provider. Please contact Professional Services to set this up for you.

- We released our new FTP upload server. Now all users can upload files to the VideoManager via FTP, as long as they have upload rights. The old server will shut down in **February 2019.** Refer to our documentation for more information.

- Channel Metadata can now only be edited if users have "Edit channels" rights. Otherwise, all fields appear disabled and Channel Attachments can only be downloaded, not replaced or deleted.
    - Date, Select and Number types are now available as Custom Metadata for Channels.
