

# Video Conference

"Video Conference" is a separate feature package and may not be available in your webcast. Contact your administrator for more details.

With video conference Connectors, you can use webcast to redistribute all the participants in a video conference to an audience of "view-only" attendees. You can use a variety of video conference platforms, including Skype for Business and Google Hangouts.

In the Operator, a new edit panel called Video Conference will appear.

 Video Conference 

**Connector Status**  

Required asdfghjkl@vc.movingimage.com

**Dial-in (Guest) PIN**  

299260

This panel contains an "email address" (actually a conference room ID) and a PIN. Your webcast participants need both in order to dial into your webcast conference.

To connect the webcast to a video conference platform, click the [  ] button. When the indicator shows "Started" in green, the video conference platform can then add webcast participants using the displayed alias and PIN. An aggregated view of all participants dialed-in to the video conference platform will be shown in the Webcast Consumer video player.

When the webcast is switched to post-live state, or the [  ] button is clicked, the video conference is automatically ended and all users will be removed from the conference room.

**Connector Status**  

Engaged asdfghjkl@vc.movingimage.com

 This connector is currently in use with another Webcast.

However, if the connector is in use by another Webcast **during the same scheduled time window as your Webcast**, you can forcibly disconnect the other Webcast from the connector and reuse it.
