

Publishing a Video

Once you are finished configuring the settings for an uploaded video, you can now publish it.

Since movingimage supports the Open Graph Protocol, elements such as title, description, and thumbnail are embedded when sharing your video content on social networks. This increases the attractiveness of the click.

The video cannot be published until it is released (see ["Releasing a Video for Publishing"](#)).

1. Open the accordion menu **Publish**.

The screenshot shows a blue header bar with a globe icon and the word 'Publish' followed by a downward arrow. Below the header, the menu is expanded to show several sections, each with a title and a text input field containing a URL or code. Each section has a copy icon (two overlapping squares) and an external link icon (a square with an arrow pointing out).

- Player**: A dropdown menu showing 'Responsive'.
- Player Size**: A text input field showing 'Responsive'.
- Share-URL**: A text input field showing a URL: `https://e.video-cdn.net/share?video-id=1n5ej-N3kHQX2QouHS6DYu&player-id=49aVF...`
- Video-URL**: A text input field showing a URL: `https://e.video-cdn.net/video?video-id=1n5ej-N3kHQX2QouHS6DYu&player-id=49aVF...`
- Preview-URL**: A text input field showing a URL: `https://e.video-cdn.net/video?video-id=1n5ej-N3kHQX2QouHS6DYu&player-id=49aVF...`
- iFrame-Code**: A text input field showing an iFrame code: `<iframe width="800" height="450" src="//e.video-cdn.net/video?video-id=1n5ej-N3k...`
- HTML-Code**: A text input field showing an HTML code: `<div mi24-video-player video-id="1n5ej-N3kHQX2QouHS6DYu" player-id="49aVFJkAy...`

2. Select a player from the drop-down menu.

The drop-down box contains all standard and user-created players (for further information see ["Player Generator"](#)). These are ordered alphanumerically, just as they are listed in the "Player Generator" area. You can ensure a certain Player will appear first in the list by making sure the first letter of the Player's name comes first alphanumerically (e.g. "1 My Favorite Player" or "**Default Player").

3. If you want to preview the video, click on the *external link icon* to launch the preview-URL in a new tab.
4. Copy one of the desired embed codes by clicking on the correspondent *copy icon*:
 - Share-URL - presents a styled page for the video and includes the video title and description (similar to the example below)
 - Video-URL - presents a plain page with the video sized according to the width of the page
 - Preview-URL - presents a plain page with the Player centered and with a width of 800px
 - iFrame-Code - an embed code that encloses the video in an iFram
 - HTML-Code - an embed code that encloses the video in a regular HTML div element
5. Paste the embed code into a website to complete the publishing process.
