

# Creating a New Player

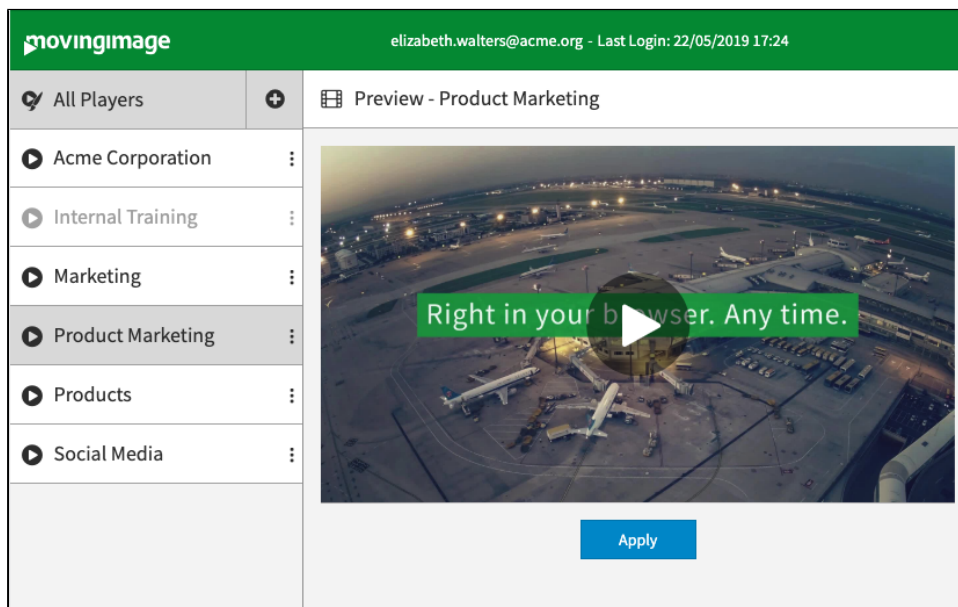

Via the navigation menu in the left pane, you have the opportunity to create a new player.

1. Click on the -symbol in the navigation area.

The screenshot shows the 'movingimage' interface. At the top is a green header with the 'movingimage' logo. Below it is a navigation bar with 'All Players' and a plus icon. The main area is titled 'Player Skin Template' and contains a dropdown menu with 'Please select'. Below that is a 'Player Name' section with a text input field containing 'Please enter a name.' and a blue 'Create' button at the bottom.

2. First, select the player skin template in the dropdown box.
3. Enter the desired name for the new player in the text box provided for this purpose.
4. Click on the [Create] button. The new player is created and appears in the navigation under "All Players".
5. Click the [ Apply ] button below the player preview to apply and save your changes.

The screenshot shows the 'movingimage' interface with a green header displaying the user 'elizabeth.walters@acme.org' and the last login time '22/05/2019 17:24'. The left navigation pane shows 'All Players' with a plus icon, and a list of players: 'Acme Corporation', 'Internal Training', 'Marketing', 'Product Marketing' (selected), 'Products', and 'Social Media'. The main area shows a preview of the 'Product Marketing' player, which is a video player with a play button and the text 'Right in your browser. Any time.' Below the preview is a blue 'Apply' button.

By default, all newly created players have the settings HTML5-player first and autoplay off. You can change this in the accordion menu **Additional Settings** (see chapter "[Additional Settings](#)").
