

Color Scheme

d

The screenshot shows the MovingImage application interface. At the top, there's a green header bar with the logo, user email (elizabeth.walters@acme.org), last login time (22/05/2019 17:24), and navigation icons for Menu, Help, and Log. Below the header, the interface is divided into three main sections. On the left is a sidebar with a list of players: All Players, Acme Corporation, Doc test, Internal Training, Marketing, Product Marketing, Products, and Social Media. The middle section is a preview area titled 'Preview - Doc test' showing a video player with an airport scene and a green text overlay that says 'Right in your browser. Any time.' Below the preview is an 'Apply' button. On the right is a 'Metadata' panel with an accordion menu where 'Color Scheme' is selected. The 'Color Scheme' panel has two sections: 'PLAY BAR' and 'CONTROLS'. The 'PLAY BAR' section includes 'Text' (hex #f5f5f5), 'Progress bar' (hex #858585), and 'Background' (hex #444444). The 'CONTROLS' section includes 'Foreground - active' (hex #f5f5f5), 'Foreground - hover' (hex #dddddd), and 'Foreground - default' (hex #858585).

You can make the following color settings in the accordion menu **Color Scheme**:

- play bar
- controls
- control bar

1. You can basically make a color adaption, by clicking on the color field in the respective player component that you want to customize (e. g. "Background"). This opens a color selection box.

This screenshot shows the 'Color Scheme' panel with a color picker open over the 'Background' field in the 'PLAY BAR' section. The color picker is a small window with a vertical color bar on the left and a square color field on the right. A small circle on the vertical bar indicates the currently selected color. The 'Background' field in the 'PLAY BAR' section has a hex code of #444444. The 'CONTROLS' section has 'Foreground - active' (#f5f5f5), 'Foreground - hover' (#dddddd), and 'Foreground - default' (#858585). The 'CONTROL BAR' section has a 'Background' field with a hex code of #f5e7e6.

2. The currently selected color is marked by a small circle. First select the shade in the vertical color bar.
3. Select the color with the color picker. Your selection is applied directly in the preview of the player.
4. Alternatively, you can enter the HEX code of the color type.
5. To make your customization visible in the public player, click the [Apply] button beneath the preview player.

Changes applied to the player settings affect all published videos that use this player.
