

# Controls

In the accordion menu **Controls**, you can enable various player controls as needed. You can toggle between "Responsive player" or "Fixed width". Each option has additional settings that can be configured.

The screenshot shows a configuration interface for video player controls. At the top, there is a green header bar with a dropdown menu, a 'Menu' icon, a 'Help' icon, and a 'Log out' icon. Below the header, there is an accordion menu with three items: 'Metadata', 'Color Scheme', and 'Controls'. The 'Controls' item is selected and expanded, showing a list of controls under the heading 'GLOBALLY VISIBLE'. Each control has a corresponding eye icon to its right, indicating its visibility status. The controls listed are: Playhead, Video length, Play, Stop, Progress bar, Mute, Volume, Full screen mode, Quality selection, and Subtitles. Below the list, there is a section for 'Responsive Player' and 'Fixed Width' options, each with a toggle switch. The 'Responsive Player' toggle is currently turned on. Below this, there are two breakpoints: 'Breakpoint 1' with a value of 768 px and 'Breakpoint 2' with a value of 1024 px. A horizontal slider at the bottom shows the range from 1 to 2000, with two blue dots representing the breakpoints.

1. By default, all available controls are visible. To hide a control, click on the [👁] -symbol of the appropriate element.

- **Playhead:** The player displays the position in the progress bar to which the video is paused.
- **Video length:** The total length of a video will be shown.
- **Play:** The video can be started via the "Play" button.
- **Stop:** The video can be stopped via the "Stop" button.
- **Progress bar:** The progress bar is displayed. In this way, the viewer can jump to specific points in the video with a mouse click.
- **Mute:** The mute can be performed by the viewer.
- **Volume:** The volume control is possible via the control bar.
- **Fullscreen mode:** The viewer can play the video in fullscreen mode.
- **Quality selection:** The video playback quality can be selected.
- **Subtitles:** The viewer has the option to turn subtitles on/ off. If there are subtitles in various languages, he can select the language.

**Sample: Control bar of a player**

2. As an option, you can enable "Responsive player" by clicking on the appropriate tab. Doing so will allow the player to adapt itself to the screen format and the aspect ratio of the playback device.
3. Alternatively, you can set a fixed size of the player. Click on the tab "Fixed width". You can then specify which fixed width you want to set for the player, in pixels. Due to the fixed aspect ratio, the player height is calculated automatically.

Please keep in mind that the valid range of values for the player width is 100px - 5000px.

Responsive Player <input type="checkbox"/>		Fixed Width <input checked="" type="checkbox"/>	
Player Width	<input type="text" value="800"/>	px	
<b>Aspect Ratio</b>		<b>Height</b>	
16:9		450px	
4:3		600px	

4. To apply your changes to the public player, click on the [ Apply ] button beneath the preview player.

Applying your changes to the player settings affects all published videos that use the same player.
