

Assigning a Video to a Group

Assigning videos to a group of owners is only available with the "Ownership" feature. Your VideoManager might not offer this feature.

With the "Ownership" feature, you can assign each video in the account to an owners group. Only members of the owners group will have access to these videos. Detailed information on the concept of ownership can be found in chapter "[Ownership - The User and Rights Management](#)".

You must have the right "Edit ownership properties" in order to define the owner group for a video.

To associate a video with a group of owners:

1. Select the desired video in the video list by clicking on the appropriate entry.
2. Open the **Security** accordion menu.

The screenshot shows the 'Security' accordion menu. It contains several sections: 'Video release' with a toggle switch, 'Download release' with a toggle switch, 'Timer for deletion' with a clock icon, 'Security Policy' with a dropdown menu set to 'Global setting', 'Group' with a dropdown menu set to 'Company' (highlighted in yellow), and 'Access Profile' with a dropdown menu set to 'Global setting'.

3. In the "Group" drop-down menu, select the desired group.

Assigning a video to a group usually means that permissions on the video will change, depending on the configuration of the respective groups. Be aware that you may lose access to the video as a result of this change.

4. Confirm your changes by clicking [Apply changes].

The 'Change group' dialog box has a title bar with a close button. The main text reads: 'You are about to change the owner group of this video. Please note that - depending on the permissions - you no longer have access to the video as a result.' At the bottom, there are two buttons: 'Cancel' and 'Apply changes'.
