FAQ REST API

This chapter contains a list of questions and answers, all supposed to be commonly asked in the context of the movingimage platform API.

How long does an access token last?

The access token has a lifetime of 5 minutes.

How long does the refresh token last?

The refresh token has a lifetime of an hour.

How is the video ID combined?

The video ID is a Base60 encoded UUID. The video ID is represented directly in the URL. All special characters are therefore in principle possible, that are allowed in URLs.

> (i) The UUID is generated automatically by our system, and cannot be customized via the API.

Which characters are supported in VideoManager Pro?

UTF-16 characters are supported.

Which fields are covered by a search term?

The request with a search term refers to the fields title, description, keywords and custom metadata fields if available.

What separator is used for a search with multiple search terms?

A request is executed comma-separated with multiple search terms.
