movingimage REST API

The REST API documentation for video asset management is now available in Swagger.

You can now interact with an API in real-time using a web interface. As well, each call includes examples, schemas, and an output - all of which facilitate understanding of how video asset management works within our solution.

> ⊙ **Request limits**
>
> The movingimage REST API has a rate limit of 100 requests per minute. Any requests that exceed this limit will be denied.
>
> Alternatively, you can
>
> - **Spread out your requests**: Instead of making all of your requests at once, spread them out over a longer period of time.
> - **Use a caching service**: A caching service can store the results of your requests so that you don't have to make the same requests again.
