

# Video Download in the Player

You can also offer your viewers a video download directly in the player. Here, users have the possibility to download transcoded video formats as needed. To enable a video download in the player, perform the following steps:

1. First, you have to enable the download feature for the player used. Open the Player Generator and go to the **Additional Settings** accordion menu.

**Additional Settings**

- Hide control bar ☐
- Slim control bar ☐
- Overlay play button ☒
- Autoplay ☒
- HTML5-player first ☒
- Download menu ☐
- Keyboard control ☐
- Lazy loading ☐
- Ads on play ☐

**PLAYER TYPE**

default

**ASPECT RATIO**

Auto

**STANDARD QUALITY FLASH**

2. Activate the "Download menu" option with the corresponding slider.
3. To allow your changes to have an impact on your player, click on the [Apply] button beneath the preview player.
4. Now activate the download release option in Asset Management. This is done in the **Security** accordion menu. To release the video for download, activate the "Download release" slider.

- The corresponding video can now be downloaded in the player.

The ability to download the original file must be activated first and therefore might not be in the list.
